Description :A blood sugar test measures the amount of a sugar called glucose in a sample of your blood.Glucose is a major source of energy for most cells of the body, including brain cells. Glucose is a building block for carbohydrates. Carbohydrates are found in fruit, cereal, bread, pasta, and rice. Carbohydrates are quickly turned into glucose in your body. This can raise your blood glucose level.Hormones made in the body help control blood glucose level.
High blood sugar and diabetes may not cause symptoms in the early stages. A fasting blood sugar test is almost always done to screen for diabetes.If patient are over age 45 and have no diabetes risk factors, he should be tested every three months.
